keep it simple

www.tricerat.com

I truly appreciate triCerat for what they have done for our Terminal Server environment. We started this project in September 2005 with one server - 6 months later we are at 5 servers and almost 400 users. I can say without hesitation, without Simplify Suite® the printer problems alone would have buried us. Aside from NO printer issues, (I never thought I would be able say that, as a Terminal Server Administrator) Simplify Suite® has given us an easy method of deploying our product. I recommend your Suite to anyone deploying Terminal Services.

Jack Hogue, WinCruise

About triCerat

Approximately eighty percent of help desk complaints are user profile-related. Since its inception in 1997, triCerat Inc. has been a pioneer in printing and user management solutions for Windows system administrators. Thousands of clients worldwide depend on us to deliver the realistic and useful solutions to transform complex and mundane registry edits and scripting tasks into a structured and reliable framework. Our alliances with Microsoft, Citrix, and VMware ensure that our software is currently compatible and will remain so in the future.

Technologies in Simplify Suite®

Eliminates the need for installing, managing, and updating print drivers on Servers and workstations. Requires no configuration and speeds print jobs by compressing print files.

The ultimate printing solution for business environments with support for Windows print servers and workstations. Also includes triCerat's flagship solution, ScrewDrivers.

Rapidly deploys thousands of customized desktops from one easy to use console.

Enhances application security by making it impossible for users to launch unauthorized applications or malicious code on their Windows system.

Provide users with the personalization they need without implementing roaming profiles. Ensure quick user logon times while retaining user preferences and settings.

Improves server performance by taking control of the way Windows allocates and manages CPU resources.

Insight into server and workstation performance by providing a range of reports and monitors on users and their application usage.

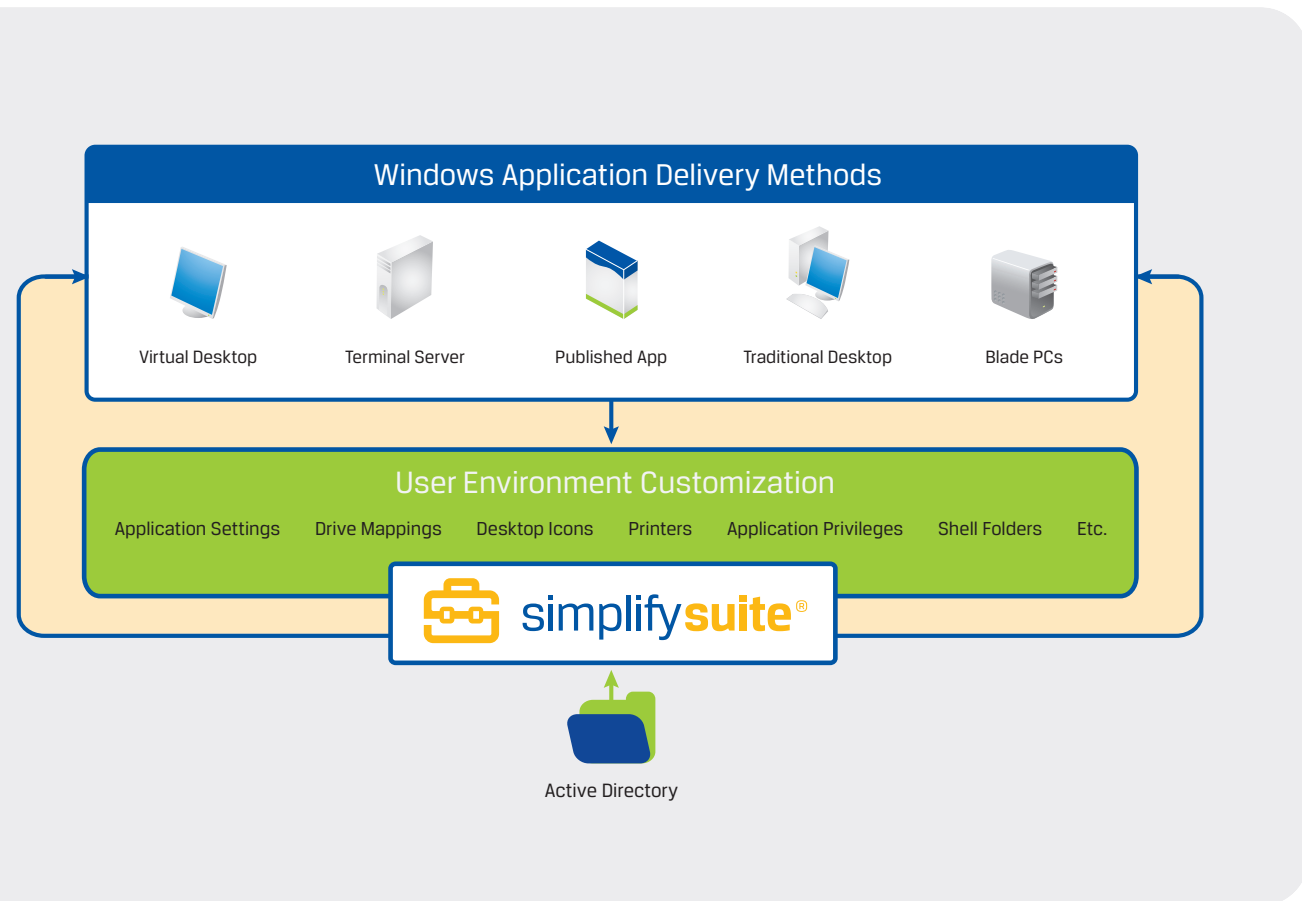

triCerat products provide solutions, critical to Windows application delivery environments

Application Performance For the on-demand enterprise, application performance problems impact all users whose sessions are supported by the server or cluster of servers hosting the offending application. Under-performing applications increase hardware and support costs while decreasing productivity and user satisfaction.

Printing Problems End users cannot access and print from all desired local or network printers or cannot use all printer functions. Installing and managing drivers on servers is time consuming, failure prone, and contributes to system instability. Universal print drivers rarely provide the full range of functionality required for all printers and users.

Application Security Windows' design allows users to access most features and functions of the operating system. The process of manually shutting down features and functions is time consuming, complex, and unscalable. Failure to adequately lockdown Windows gives users an open door to launching executables such as unauthorized applications or viruses that can compromise system integrity.

Profile Problems When managing user profiles, one should consider the balance between mandatory controls and user flexibility. When done incorrectly, profiles can extend logon and logoff times or prevent logon completely.
