

Vulnerability can be defined in the computer world as a weakness in process, administration, or technology that can be exploited to compromise IT security.

Downtime caused by security vulnerabilities has grown from five percent in 2004 to 15 percent in 2008. Overcoming such percentages means containing users to only the applications they need in order to fulfill their work obligations.

### Don't become a statistic.

Minimize the frustration of dealing with corrupted applications, crashed servers, and irate users. Aid in helping your organization become and remain compliant with regulation rules by having a list of known and trusted applications stored in a database.

Simplify Lockdown® offers peace of mind by providing easy configuration and the ability to monitor and maintain any controlled application accessible by remote desktops with superior security. Lockdown® replaces the intricate, and sometimes limiting toe-tapping scripting process with a configuration tool that enables you to prevent unauthorized users from running any specific application.

Simplify Lockdown even has the capability to recognize and stop an executable located in multiple locations as well as an unauthorized executable renamed to mimic an accepted executable.

It's completely up to you what runs on your system. triCerat's approach to software solutions are to resolve them before they even begin.

### Try Us Out!

Visit our Website at [tricerat.com](http://tricerat.com) or feel free to call us with any questions at our US toll-free number: **1 800.582.5167**

### Features

- **triMode Application Control** gives ultimate flexibility in authorizing trusted and banned lists to support individual user requirements
- **App Informant** discovers initial application usage per user, facilitating integration.
- **Secure Application Signature** automatically generates secure application signature.
- **User-Friendly Alerts** allows you to customize user notifications.

### Benefits

- Prevents unauthorized applications and malware from corruption.
- Boosts productivity by controlling access to the applications and services users require for work only.

*"Simplify Lockdown gives us complete control over individual applications on our Windows desktops. We support up to 800 concurrent users. Simplify Lockdown reduces user administration to its simplest form."*
